Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

/noce="Organ: juvenile vegetative shoots; Vector: /noce="Organ: juvenile vegetative shoots; Vector: pAD-GAI-2-1; Site 1: ECORI; Site 2: Khol; Equal amounts of total RNA by weight from 4 tissue sources (see below) were pooled, polyA+ RNA isolated, and cDNA synthesized for BCORI (5') and Xhol (3') directional cloning into lambda Hybrizap vector from Stratagene. Tissue Sources: 1. Whole shoots 3 days after sowing/imblbing in wet soil. 2. Basal 1.5 cm shoots 6 days after sowing - includes yellow portions of developing leaves 1-5, primordia from 6-8, and the vegetative apex. 3. Non-green portions of developing leaves 4-5 and the vegetative apex, including adult leaf primordia, 9 days after sowing. 4. Partially expanded and greening leaves 4-5 at 13 days after sowing."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          one

The library was characterised by oligonucleotide fingerprinting
(ONFP) to reduce sequencing redundancy. According to the ONFP
procedure, clones giving the same hybridiseation pattern with a
procedure, clones giving the same hybridiseation pattern with a
battery of 200 8mer oligonucleides are grouped into clusters. One
clone per cluster is selected for sequencing. The size of each
cluster is an indicator of the frequency of a transcript in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     BI381359 489 bp mRNA linear EST 26-AUG-2003 BFLG1 002990 Amphioxus 5-6 hrs cDNA library (Name convention: BFLG or MPWGp498) Branchiostoma floridae cDNA clone MPWGp498P2422 5',

/ note="Weator: pSPORT; site_1: Not1; Site_2: Sall; lst

/ prode="Yeator: pSPORT; site_1: Not1; Library was constructed by Matthew Clark (Lehrach lab; lcRF, London and Max Planck)

digested with Not 1 and cloned into the Not 1 and Sall I

sites of the pSPORT; vector (BRL). Library was constructed by Matthew Clark (Lehrach lab; ICRF, London and Max Planck)

Institut fuer Molekulare Genetik, Berlin). cDMAs for EST

analysis were selected following oligonucleotide

hybridization fingerprinting of arrayed clones from zebrafish late somitogenesis (2s ss), adult liver or embryonic shield stage (5.6 h) libraries. Fingerprint data were used to computationally cluster cDNAs, and a single cDNA from each cluster was chosen for sequencing in some cases multiple members of the same cluster were sequenced to assess quality!

BB160010A20B08.5 Bee Brain Normalized Library, BB16 Apis mellifera cDNA clone BB160010A20B08 5', mRNA sequence.
                        fincte..."Organ: blood, Vector: pTriplEx2; Site 1: Sfil; Site 2: Sfil; A complementary DNA (cDNA) library from human erythroid precursor cells was constructed using SMART PCR (polymerase chain reaction) cDNA Library Construction Kit (Clontech, Palo Alto, CA) according to the manufacturer's directions, but with slight modifications. Briefly, reverse transcription was performed in the presence of 1 umol/L peptide nucleic acid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                          (N-terminal)-biotin-GTC-CAC-CG-AAG-CTT-G-(C-terminal) and (N-terminal)-biotin-C(T/C)T-GAA-GTT-CTC-AGG-A-(C-terminal). Synthesized cDNA was digested with Sfil and size-selected on a 1% agarose gel (>800bp). Large-scale sequencing of the library was performed by the NIH Intramural Sequencing Center (NISC).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Apidac, Apidac, Apidac, Apidac, Apidac, Apidac, Apidac, Apidac, Apidac, Apidac, Apidac, Apidac, Band, M.R., Bonaldo, M.F., Kumar, C.G., Liu, L., Pardinas, J., Roberteon, H.M., Soares, B. and Robinson, G.E.

Descuence 42.9. Application US/USISTOLE
Patent NO. 6.380370
GENERAL INFORMATION:
APPLICANT: LYAIN DOUGETE-Stamm et al
APPLICANT: LYAIN DOUGETE-Stamm et al
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO STAPHYLOCOCCUS
TITLE OF INVENTION: BPIDERMIDIS FOR DIAGNOSTICS AND THERAPEUTICS
TITLE OF INVENTION: BPIDERMIDIS FOR DIAGNOSTICS AND THERAPEUTICS
CURRENT APPLICATION NUMBER: US/09/134,001C
CURRENT FILING DATE: 1998-08-13
PRIOR APPLICATION NUMBER: US 60/064,964
PRIOR APPLICATION NUMBER: US 60/055,779
PRIOR PILING DATE: 1997-08-14
NUMBER OF SEQ ID NOS: 5674
SEQ ID NO 2275
APPLICANT: Tabone, John C.
TITLE OF INVENTION: METHODS FOR IMPROVING THE SEQUENCE
TITLE OF INVENTION: FIDELITY OF SYNTHETIC DOUBLE-STRANDED OLIGONUCLECTIDES
FILE REPERENCE: 3400/084401
CURRENT APPLICATION NUMBER: US/09/872,761A
CURRENT FILING DATE: 2001-06-01
NUMBER OF SEQ ID NOS: 15
SOFTWARE: FastSEQ for Windows Version 4.0
SEQ ID NO 1:
LENGTH: 205
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps

Sequence 10, Application US/09872761A

Patent No. 6664112

GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: MAINIGAN, John T.
APPLICANT: Tabone, John C.
TITLE OF INVENTION: METHODS FOR IMPROVING THE SEQUENCE
TITLE OF INVENTION: FIDELITY OF SYNTHETIC DOUBLE-STRANDED OLIGONUCLEOTIDES
FILE REFERENCE: 340078-401
CURRENT APPLICATION NUMBER: US/09/872,761A

CURRENT FILING DATE: 2001-06-01
NUMBER OF SEQ ID NOS: 15
SOFTWARE: FASESQ for Windows Version 4.0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps

; Sequence 3126, Application US/09621976
; Patent No. 663063
; GENERAL INPORMATION:
; APPLICANT: Dumas Milne Edwards, J.B.
APPLICANT: Jobert, S.
; APPLICANT: Glordano, J.Y.
; TILLE OF INVENTION: ESTS and Encoded Human Proteins.
; TITLE OF INVENTION: ESTS and Encoded Human Proteins.
; TITLE OF INVENTION: ESTS and Encoded Human Proteins.
; FILE REFERENCE: GENERIC 1054 PR.
; FILE REFERENCE: 2000-07-21
; NUMBER OF SEQ ID NOS: 19935
; SOFIWARE: Patent.pm
; SEQ ID NO 3126
; LENGTH: 707
MEDIUM TYPE: Floppy disk
COMPUTER: IBM PC compatible
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: Patentin Release #1.0, Version #1.25
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/08/217,360
FILING DATE: 24-MAR-1994
CLASSIFICATION: 800
ATTORNEY/AGENT INFORMATION:
NAME: REED, Jamet E.
REGISTRATION NUMBER: Rutgers University
TELECOMMUNICATION NUMBER: Rutgers University
TELECOMMUNICATION INFORMATION:
TELECHANDE: (215)563-4400
TELEFRACE CHARACTERISTICS:
SEQUENCE CHARACTERISTICS:
SEQUENCE CHARACTERISTICS:

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 10,

Patent No. 656258

GENERAL INFORMATION:
APPLICANT: Gary L. Breton et al.
TITLE OF INVENTION: BUMBANNI FOR DIAGNOSTICS AND THERAPEUTICS
FIRE REFERENCE: GTC99-03PA
CURRENT APPLICATION NUMBER: US/09/328,352
CURRENT APPLICATION NUMBER: US/09/328,352
CURRENT FILING DATE: 1999-06-04
NUMBER OF SEQ ID NOS: 8252
SEQ ID NO 905
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö

The invention provides a new prodrug activating agent that comprises: (i)

a localization domain (LD; other than a tumor-selective antibody) and a prodrug activating domain (PDD); (ii) at least one nucleic acid encoding a cytochrome P450 and under control of at least one constitutive or inducible expression control sequence or (iii) a modified hematopoietic stem cell (MHSC) containing at least one nucleic acid encoding a PAD and under control of elements as in (ii). The prodrug activating agent or vectors that express them, are specifically used to treat tumors, inflammation, atherosclerosis and muscular dystrophy, but may also be used to treat many other conditions, e.g. cerebral malaria, theumatoid used to treat many other conditions, andivinal agents, analgesics, arthritis, or conditions associated with hypoxia, hypoglycemia or ischemia, or to deliver antibiotics, antiviral agents, analgesics, anti-inflammatorimental agents and diagnostic agents. LD optimize activity of PAD, e.g. by delivering it to selected locations or by delivering it to neighboring cells (bystander effect), and allow a reduction in dose of prodrug, and thus of systemic side effects. Nucleic acids encoding the agent may be expressed selectively in hypoxic cells. Sequences AAZO7752.3 represent primers for amplifying derivatives of human P450 reductase
                                                                                                                                                                                            Prodrug, localization domain; tumor-selective antibody; cytochrome P450; prodrug activating domain; modified hematopoietic stem cell; MHSC; tumor; inflammation; atherosclerosis; muscular dystrophy; cerebral malaria; rheumatoid arthritis; hypoxia; ischemia; hypoglycemia; PCR primer; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New prodrug activating agent targeted to selected cells or tissues, particularly hypoxic cells, for treating e.g. tumors or inflammation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Griffiths L;

```
The invention provides a new prodrug activating agent that comprises: (1) a localization domain (LD; other than a tumor-selective antibody) and a product activating domain (PDD); (ii) at least one nucleic acid encoding a cytochrome P450 and under control of at least one constitutive or inducible expression control sequence or (iii) a modified hematopoietic stem call (MESC) containing at least one nucleic acid encoding a PAD and under control of elements as in (ii). The prodrug activating agent or vectors that express them, are specifically used to treat tumors. Inflammation, atherosolerosis and muscular dystrophy, but may also be used to tream many other conditions, e.g. cerebral malaria, rheumatoid arthritis, or conditions associated with hypoxia, hypoglycemia or ischemia, or to deliver antibiotics, antiviral agents and diagnostic agents. LD optimize activity of PAD, e.g. by delivering it to selected locations or by delivering it to neighboring cells (bystander effect), and allow a reduction in dose of prodering way thus of systemic side effects. Nucleic acids encoding the agent may be expressed selectively in hypoxic cells. Sequences AAZO7756-57 represent primers for amplifying human P450 reductase functional fragment
                                                                                                                                                                                                                                                                                   Prodrug; localization domain; tumor-selective antibody; cytochrome P450; prodrug activating domain; modified hematopoietic stem cell; MHSC; tumor; inflammation; atherosclerosis; muscular dystrophy; cerebral malaria; rheumatoid arthritis; hypoxia; ischemia; hypoglycemia; PCR primer; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New prodrug activating agent targeted to selected cells or tissues, particularly hypoxic cells, for treating e.g. tumors or inflammation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Kan O, Griffiths L;

This sequence represents a nuclear localisation signal/anchorless P450R 5. PCR primer, used with a 3' primer (AAZ19790) in the construction of a vector encoding a fusion protein comprising the simian virus 40 (SV40) (large T antigen nuclear localisation signal (NLS) and the cytochrome P450 reductase (P450R) derivative, anchorless P450R (AAY42287). Construction of this fusion protein allows retargetting of P450R activity to the conclus. Many drugs' sites of action are in the nucleus, rather than the cytoplasm, where P450R normally functions. P450R or its derivatives can concluse to a prodrugs to their active form via reduction.

Construction of a prodrug is useful where the active drug may be networlised before it reaches its site of action or where the active drug construction, e.g., anticancer drugs. P450R derivative fusion proteins, or evectors that express them, are specifically used to treat tumours, inflammation, atherosclerosis and muscular dystrophy, but may also be conditions associated with hypoxia, ischaemia or conditions associated with hypoxia, ischaemia or hypoglycemia, or to deliver antibiotics, antiviral agents, analgesics, anaesthetics, anti-inflammatories, antineoplastic agents and diagnostic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ..

This sequence represents a nuclear localisation signal/P450R FN fragment construction of a vector encoding a fusion protein compitaling the similar virus 40 (8740) larger antiquent unclear localisation signal (NLS) and the cytochrome P450 reductase (P450R) derivative, P450R FN fragment (AAM42288). Construction of this fusion protein allows retargetting of P450R activity to the nucleus. Many drugs' sites of action are in the nucleus. Tather than the cytoplasm, where P450R normally functions. P450R or its derivatives can be used to activate produgs to their active form via reduction. Administration of a produg is useful where the active drug may be metabolised before it reaches its site of action or where the active drug is sytotoxic, e.g., anticancer drugs. P450R derivative fusion proteins, or vectors that express them, are specifically used to treat tumours, inflammation, atherosclerosis and muscular dystrophy, but may also be used to treat many other conditions, e.g., cerebral malaria, rheumatoid architis, or conditions associated with hypoxia, ischaemia or architical contract many chief antibiocics, antiviral agence, analgence, antiviral agence, antiviral agence, antiviral agence, analgence, antiviral agence, anti

The invention relates to a novel device for diagnosis, prognosis and monitoring of therapy having, on its surface, sequences of some or all of specified manocyte-macrophage genes and also of other genes or RNA complementary to the specified genes. The device of the invention may be used to determine gene expression profiles for measurement of monocyte or macrophage activation or inflammation in blood or other tissues, as well as for the diagnosis, prognosis and monitoring therapy in cases of induced inflammation, arteriosclerosis, tumours, organ or tissue transplants and sepsis. The device provides information for molecular classification and staging of diasase, oreation of a patient-specific prognostic profile and suggestions about molecular pathogenesis or therapeutic effects, thus facilitating the development of new therapeutic strategies and pharmacological concepts. The current sequence is that of the human BSK DNA of the invention.
                                                                                                                                                                                                                                  Device for diagnosis, prognosis and monitoring therapy of e.g. rheumatoid arthritis, comprises immobilized gene sequences from monocyte-macrophage
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Human; ds; bisulphite treatment; CpG; DNA methylation; cancer; tumour; cytostatic; ALDH6; CYP11A; CYP11B1; CYP3A3; DPYD; EPHX2; OCLN; TXNRD1; UGT8; MRP; pharmacogenomics; SNP; single nucleotide polymorphism.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  .
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention comprises the amino acid and coding sequences of fusion proteins that contain a recombinase domain and a signal peptide domain which directs nuclear import of the fusion protein in eukaryotic cells. The fusion protein in eukaryotic cells. The fusion proteins of the invention are useful for recombining the DNA molecules of cells or organisms containing recombinase recognition proteins of the recombinase domain of the fusion proteins. The fusion proteins of the invention are useful for studying gene function at various developmental stages and for the creation of transgenic organisms. The Cil-Int recombination system of the invention can be used for the selespecific integration of forcing DNA into the genome of mammalian cells (e.g. for gene therapy). The present DNA sequence represents a vector that was used in the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Novel fusion protein useful for recombining DNA molecules in eukaryotic cells has recombinase protein which is linked to signal peptide domain which directs nuclear import of fusion protein in eucaryotic cells.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention comprises the amino acid and coding sequences of fusion proteins that contain a recombinase domain and a signal peptide domain which directs nuclear import of the fusion protein in eukaryotic cells. The fusion proteins of the invention are useful for recombining the DNA molecules of cells or organisms containing recombinase recombining the DNA sequences for the recombinase domain of the fusion proteins. The fusion proteins of the invention are useful for studying gene function at various developmental stages and for the creation of transgenic for the site-specific integration of fortion of the invention can be used for the selection of forting DNA into the genome of mammalian cells (e.g. for gene therapy). The present DNA sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Novel fusion protein useful for recombining DNA molecules in eukaryotic cells has recombinase protein which is linked to signal peptide domain which directs nuclear import of fusion protein in eucaryotic cells.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention comprises the amino acid and coding sequences of fusion proteins that contain a recombinase domain and a signal peptide domain which directs nuclear import of the fusion protein in eukaryotic cells. The fusion proteins of the invention are useful for recombining the DNA molecules of cells or organisms containing recombinase recognition sequences for the recombinase domain of the fusion proteins. The fusion proteins of the invention are useful for sudying gene function at various developmental stages and for the creation of transgenic organisms. The C31-int recombination system of the invention can be used for the site-specific integration of foreign DNA into the genome of mammalian cells (e.g. for gene therapy). The present DNA sequence represents a vector that was used in the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Novel fusion protein useful for recombining DNA molecules in eukaryotic cells has recombinase protein which is linked to signal peptide domain which directs nuclear import of fusion protein in eucaryotic cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      .

into the genomes of the cells. (I) is capable of modifying target gene in a cell with high efficiency and specificity. Use of (I) provides a faster and more efficient means for isolating and selecting cells comprising target gene modification. Also use of (I) provides an increase over previous technologies in both the speed and frequency at which homologous recombination events can be recovered. (I) is also useful for creation of transgenic animals containing targetted gene modifications. This sequence represents the positive selection vector construct c3406
                                                                                                                                                                                                                                   ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The patent discloses a method of propagating recombinant adenoviral vectors in eukaryotic cells expressing lac repressor protein. The vector comprises of nucleic acid encoding a heterologous protein (like rabies glycoprotein G) linked to a lac operator region, to which the lac repressor binds and represses the expression of heterologous protein. The eukaryotic cell lines can be used for replicating recombinant adenoviral vectors by inhibiting production of certain viral-proteins whose overexpression inhibits the production of viruses. The present sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New recombinant eukaryotic cells, containing a polynucleotide encoding a repressor protein and an expression vector that produces a heterologous

ï
is recombinant plasmid pMPG3. It comprises of El region- deleted adenoviral genome, lac repressor (LAP348) gene, Simian virus 40 derived Poly A addition sequence, transcription activation domain from Herpes simplex virus type 1 VP16, human cytomegalovirus (HCMV) promoter and a copy of adenovirus inverted terminal repeats (ITRs). These plasmids can be used to transfect eukaryotic cells. (Updated on 06-AUG-2003 to correct OS field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  lated nucleic acids and polypeptides, useful for preventing diagnosing treating e.g. leukemia, inflammation and immune disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       10
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to human polynucleotides (AAI79941-AAI93841) and the encoded proteins (AA000010-AA019910) that exhibit activity elating to prytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polynucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, immunomodulatory activity and activity, tissue growth factor activity, immunomodulatory activity and activin/inhibin activity and may be useful in the diagnosis and/or restantent of cancer, leukaemia, nervous system disorders, arthritis and inflammation. Note: The sequence data for this patent did not form part dit he printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention describes a targeting vector (positive selection vector)

(I) capable of modifying a target gene. (I) comprises two sequences (S1 and S2) homologous to a portion or region of a target gene, a selectable marker cassette and a regulator. (I) is useful for producing cells comprising a modification of the target gene which involves introducing (I) into cells capable of homologous recombination, selecting for cells expressing the selectable marker and identifying cells containing the modification of the target gene. Use of (I) for enriching cells comprising disruption or modification of target gene enhances recovery of
cells having targeting vector integrated via homologous recombination into the genomes of the cells. (I) is capble of modifying target gene in a cell with high efficiency and specificity. Use of (I) provides a faster and more efficient means for isolating and selecting cells comprising trarget gene modification. Also use of (I) provides an increase over previous technologies in both the speed and frequency at which homologous recombination events can be recovered. (I) is also useful for creation of transgenic animals contraining targetted gene modifications. This sequence represents the SV40 large I antigen nuclear localisation signal incorporated into the positive selection vector constructs described in
                                                                                                                                                                                                                                                                                                           9
                                                                                                                                                                                                                                                                                                                                      9

cells having targeting vector integrated via homologous recombination into the genomes of the cells. (I) is capable of modifying target gene in a cell with high efficiency and specificitry. Use of (I) provides a faster and more efficient means for isolating and electing cells comprising target gene modification. Also use of (I) provides an increase over previous technologies in both the speed and frequency at which homologous recombination events can be recovered. (I) is also useful for creation of transgenic animals containing targetted gene modifications. This sequence represents an oligonuclectide used in the creation of the positive selection vectors for targetted gene modification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention describes a targeting vector (positive selection vector)

(I) capable of modifying a target gene. (I) comprises two sequences (S1 and S2) homologous to a portion or region of a target gene, a selectable marker cassette and a regulator. (I) is useful for producing cells comprising a modification of the target gene which involves introducing (I) into cells capable of homologous recombination, selecting for cells expressing the selectable marker and identifying cells containing the modification of the target gene. Use of (I) for enriching cells comprising disruption or modification of target gene enhances recovery of cells having targeting vector integrated via homologous recombination
                                                                                                                                                                                                                                                                                                                                                       9
                                                                                                                                                                                                                                                                                                                                                                                             62
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Novel targeting vector modifying target gene, has first and second sequences homologous to target gene portions, a selectable marker cassette and regulator, useful for producing animals with targeted gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Transgenic animal, targeting vector, positive selection vector, homologous recombination, target gene modification; transgenic animal,

Repeats are identified using RepeatMasker (A. Smit and P. Green, unpublished.) for Human and Mouse sequences.

Gene and Region of Sequence similarity are identified by BLAST (Nac. Acids Res. 25:338-3402) similarity (expect < 1e-34) to the BST and cDNA sequences Genes demonstrate at least two exons flanked by consensus splice sites that maintained sequence continuity across the splice junctions. Sequences that are not identical matches are annotated as similar.
                                                                                                                                                                                                            Direct Submission

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         SEQUENCING READ COVERAGE:Sequencing is completed to a minimum standard of double strand coverage with a minimum of 2 clones and reads with no ambiguities or 2 chemistries with a minimum of 2 clones and 3 reads with no ambiguities. If the sequence quality fo a region does not meet this standard, it will be indicated in the annotation as Low Coverage.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             QUALITY OF INDIVIDUAL BASES:This sequence meets stringent quality standards - estimated error rate less than 1 per 10,000 bases. Reports of lowest quality individual bases and measures of base quality are listed below. Description of the metrics can be found
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       tottottoa (g) ataacaaaaa

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             CLONE LENGTH: This sequence does not necessarily represent the entire insert of this clone. Overlapping regions of clones are o sequenced and submitted once, so the sequence for the remainder the insert may be found in the record for the adjacent clones. Overlapping clones are noted at the beginning and end of the Features listing.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     http://gc.bcm.tmc.edu:8088/quality.info/genbank.annotation.html

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      à
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   g
                                                               SEQUENCING READ COVERAGE:Sequencing is completed to a minimum standard of double strand coverage with a minimum of 2 clones and 2 reads with no ambiguities or 2 chemistries with a minimum of 2 clones and 3 reads with no ambiguities. If the sequence quality for a region does not meet this standard, it will be indicated in the annotation as Low Coverage.
                                                                                                                                                                                 QUALITY OF INDIVIDUAL BASES: This sequence meets stringent quality standards - estimated error rate less than 1 per 10,000 bases. Reports of lowest quality individual bases and measures of base quality are listed below. Description of the metrics can be found
                                                                                                                                                                                                                                                                      http://gc.bcm.tmc.edu:8088/quality.info/genbank.annotation.html.
flanked by consensus splice sites that maintained sequence continuity across the splice junctions. Sequences that are not identical matches are annotated as similar.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        /rpt_family="LiMA4"

Overlapping regions of clones are only sequenced and submitted once, so the sequence for the remainder of the insert may be found in the record for the adjacent clones. Overlapping clones are noted at the beginning and end of the Peatures listing.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    old modern another than and Mouse sequences.

Repeats are identified using RepeatMasker (A. Smit and P. Green, Repeats are identified using Regeates.) for Human and Mouse sequences.

Genes and Region of sequence similarity are identified by BLAST (Nuc. Acids Res. 25:3389-3402) similarity (expect < 1e-34) to the EST and cDNA sequences. Genes demonstrate at least two exons
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               SISs are identified using ePCR (Genome Res. 7:541-550) searches of a local database that includes entries from dbSTS, GDB, and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Worley, K.C.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats, all regions were covered by sequence from more than one subclone; and the assembly was confirmed by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The RCI-11 human BAC library was made from the blood of one male donor, as described by Osoegawa, K., Woon, P.Y., Zhao, B., Frengen, E. Tateno, M., Catanese, J.J. and de Jong, P.J. (1998) An improved approach for construction of bacterial artificial chromosome libraries. Genomics 51:1-8. The clone may be obtained either from Research Genetics, Inc. (http://www.resgen.com) or Pieter de Jong VECTOR: pBACe3.6
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       SOURCE INFORMATION:

NEIGHBORING SEQUENCE INFORMATION:
The clone sequenced to the left is RP11-515K12; the clone sequenced to the right is AC026337. Actual start of this clone is at base position 1 of RP11-279E17; actual end is at base position 168991 of

position 1 RP11-279E17

RP11-279E17 contains a transposon in the growth of the clone that has been omitted from the submitted sequence. It would insert after base 95823. Polymorphisms exist between RP11-279E17 and

Submitted (04-JUL-2002) Wellcome Trust Sanger Institute, Hinxton, Cambridgeshire, CB10 15A, UK. E-mail enquiries: humanited (04-JUL-2002) Wellcome requests: clonarequest Sanger. ac.uk Clone requests: clonarequest Sanger. ac.uk on Jun 3, 2000 this sequence version replaced gi:7767882.

During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission only a small overlap as described above.

The following abbreviations are used to associate primary accession numbers given in the feature tabbe with their source databases:

EMEL; Sw.; SWISSERCH; Tr.; TREMBL; Wp.; WORMPEP; Information the WORWPEP database can be found at http://www.sanger.ac.uk/Projects/C_alegans/wormpep This sequence the http://www.sanger.ac.uk/HOFO/chr20

This sequence is the entire insert of clone RPII-243J16 The true left end of clone RPII-141719; is at 1243J16 The true true right end of clone RPII-141719; at 22723 in this sequence. The RPII-243J16 is from the library RPCI-II.1 constructed by the group of Pieter de Jong. For further details see

                                                                                                                                                                                                                                                                                                                                          NOTE: This is a 'working draft' sequence. It currently consists of 13 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ,
